

A very intelligent controller from the designers of the Smart Console.

A combination of Features, Technology, Ergonomics, and Quality that will blow your mind but not your budget.

The Smart Console Expert Panel has dedicated Automation and ARC modifier controls, as well as Grouping, Ergonomic Spread, Solo and Monitoring controls.

Parameters such as plug ins are automatically assigned to the 16 Touch Sensitive Encoders (24 DPI with Detents and a Push Button). These are tied to the screen graphics for intuitive control and easy access.

Each of the 8 channels has a dedicated HOLD button, 100mm Touch Sensitive Motorized Fader, Inject Touch Point, Mute Button, Solo Touch Point and Touch Sensitive Encoder. Each channel strip extends in to an in-line touch surface of virtual controls each dedicated to the task at hand.

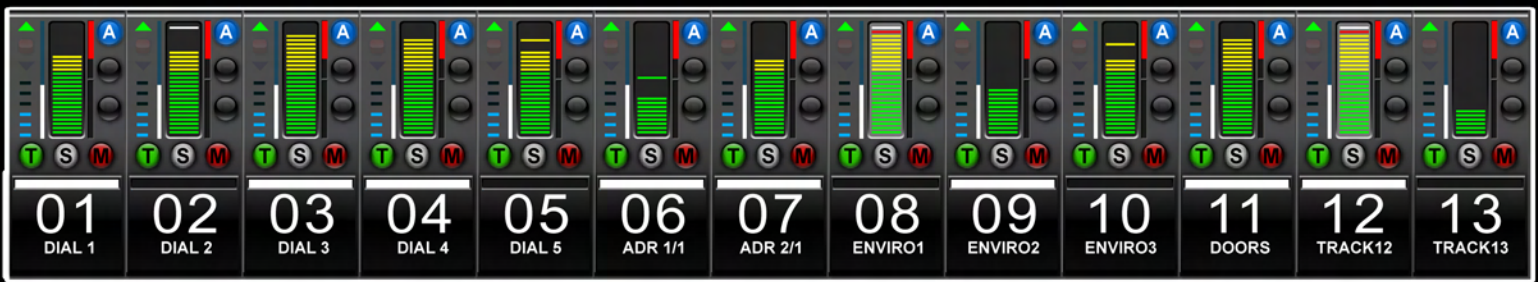

The Console has a built in Mouse Pad for Workstation control, above which lie dedicated Transport and Locator buttons, a Jogger Wheel with Modifier Buttons, and dedicated Cursor and Selection buttons.

Smart AV has combined their patented ARC Technology with a huge 22" touch wide-screen to produce the most versatile and intuitive workstation controller yet, at an amazing price. With super fast Ethernet control of Logic 8 and Nuendo 4, Tango offers music and post production features not available on any thing else. Interfaces with other work stations will follow.

TANGO
SMARTCONSOLE

PRELIMINARY
INFORMATION

The physical ARC has been replaced by MonARC, a scrolling screen based channel overview display, coupled with the touch screen selection of channels for control of up to 300 channels. The display can be configured over multiple touch screens when the extn bay is fitted, or alternatively it can overlay workstation displays and picture displays. The MonARC system provides a comprehensive meter bridge with indicators for EQ, Aux sends, Solo, Mute, Automation, and faders. At a glance you can see the status of all your input channels.

The Touch Screen Layout is User Definable and will recall many layouts instantly. For example, you can create screen layouts for General Mixing, ADR recording, Sound Effects Spotting, Music Composition, etc.

The screen graphics are modular, so that any parameter can be assigned any representation type. (Bar Graphs, Sliders, Buttons, Knobs, etc.). There are also dedicated displays for EQ graphs, Dynamics Graphs, Surround Panning and other unique controls. Smart AV will be updating the library of icons and controls periodically and a development kit will be available for total customisation.

Below are just three examples of the way we can create short cuts with the use of the touch screen.

High resolution graphical representation of all mixer controls.

An editor featuring user programmable virtual keys for super fast control of all editing functions.

A virtual keyboard for rapid text entry of track and clips name, sound effects searching etc.
